The information below is the NBS Plus product entry for Triton Systems Triject 3 - Water Based DPC Injection Fluid.

## Triject 3 - Water Based DPC Injection Fluid

Triject 3 is a water-based dpc system designed to be injected into walls affected by rising damp. The main ingredient is potassium methyl silicate.

A 5% concentration solution is injected (at a pressure of 140–345 kPa) into predrilled holes in either bricks or mortar joints until fluid is seen to reach the wall surface.

Triject 3 reacts with carbon dioxide to form a permanent, water repellent coating within the masonry capillaries.
